

# New AMSOIL Dominator® Racing Oils

Dominator line expands to include three new premium racing oils.

AMSOIL now offers three new premium synthetic racing oils specially formulated to withstand the rigors of high-performance and racing applications. AMSOIL Dominator® Synthetic 5W-20, 10W-30 and 15W-50 Racing Oils provide superior performance and maximum protection in extreme environments.

## Dominator

Ask any snowmobile or two-stroke motocross racer about AMSOIL and he or she knows the name Dominator. AMSOIL Dominator Synthetic 2-Cycle Racing Oil has earned a reputation for providing maximum power output while maintaining maximum protection in two-stroke racing and high-performance applications. The name recognition, reputation and superior performance of Dominator Synthetic 2-Cycle Racing Oil is so widespread, AMSOIL has adopted the Dominator name for all of its racing products.

## Three Viscosities, One Additive Package

Racing and high-performance engines subject motor oil to elevated RPM, high temperatures and shock-loading. AMSOIL Dominator Synthetic Racing Oils were developed to address these extreme conditions and provide high-quality AMSOIL performance and protection for a variety of racing applications. All three Dominator Racing Oils feature the same additive package, providing maximum durability in multiple viscosities. Their shear-stable formulation was engineered to provide maximum horsepower without sacrificing engine protection. Dominator Racing Oils provide straight-grade protection in a multi-grade formulation.

## Maximum Durability, Maximum Wear Protection

AMSOIL Dominator Synthetic Racing Oils feature an additive package heavily fortified with zinc and phosphorus for superior long-term wear protection. Designed for maximum durability, their shear-stable formulation ensures critical engine components are protected for the duration of the race. The superior additive technology of Dominator Synthetic Racing Oils provides unmatched durability in extreme conditions.

## Superior Performance

The proprietary friction modifier of Dominator Synthetic Racing Oils provides reduced friction for maximum power and cooler engine temperatures, resulting in improved lap times and longer-lasting equipment.

## Protection from Startup to the Checkered Flag

The multi-viscosity design of Dominator Synthetic Racing Oils provides maximum protection in temperature extremes. Dominator Racing Oils offer excellent cold-start protection and maintain superior film strength during high-temperature operation on the track.

## Superior-Quality Oils, Don't Discriminate

Many oil companies produce specialty racing oils for elite groups and do not offer them to the general public. For instance, several popular oil manufacturers produce racing oils offered only to NASCAR racers. AMSOIL receives inquiries as to why the company does not offer "special," higher-quality or NASCAR oils. However, all AMSOIL syn-

thetic motor oils are already formulated to a higher level than competitors' oils, and AMSOIL Dominator Synthetic Racing Oils are no exception. They provide maximum performance and superior protection to all racers, regardless of their level of competition. The same AMSOIL Dominator Synthetic Racing Oils that are used in the engines of AMSOIL corporately-sponsored racers such as Scott Douglas and Brady Smith are available to everyone.

## Dominator 15W-50 Racing Oil

AMSOIL Dominator Synthetic 15W-50 Racing Oil (RD50) is recommended for high-rpm, high-horsepower, turbo/supercharged, gasoline- or alcohol-burning, nitro-fueled or nitrous oxide gas-injected applications operated under severe conditions. Applications include the following:

- Big Bore • Asphalt Late Model • Dirt Late Model
- Modified Big Block • Ford Crate Late Model • Dodge Crate Late Model • Endurance • Rally • Truck-Pull • Aluminum Block • Marine • Other high-performance racing and street applications requiring 50-weight oil.

## Dominator 10W-30 Racing Oil

AMSOIL Dominator Synthetic 10W-30 Racing Oil (RD30) is recommended for high-rpm, high-horsepower, turbo/supercharged, gasoline- or alcohol-burning and nitrous oxide gas-injected applications operated under severe conditions. Applications include the following:

- Asphalt Late Model • Dirt Late Model
- Modified Big Block • Modified Small Block • GM Crate Late Model • Marine • Sprint • Midget • Kart • Other domestic and import high-performance racing and street applications requiring 30-weight oil.

## Dominator 5W-20 Racing Oil

AMSOIL Dominator Synthetic 5W-20 Racing Oil (RD20) is recommended for high-rpm, high-horsepower, turbo/supercharged, gasoline- or alcohol-burning and nitrous oxide gas-injected engines operated under severe conditions. Applications include the following:

- Modified Small Block • Asphalt Late Model • GM Crate Late Model • NHRA Stock Eliminator • Bracket • Sprint • Midget • Karts • Junior Dragster • Other domestic and import high-performance racing and street applications requiring 20-weight oil. The low-viscosity formulation and robust additive package of Dominator 5W-20 make it ideal for use as a high-strength qualifying oil.
