

Here is a story provided to me by one of my customers of how AMSOIL saved his engine.

I had an old VW Bug which is air cooled and has an aluminum block. I had been in the process of rebuilding it and had started using AMSOIL. Well one Saturday, in the middle of August in the Texas heat, I needed to do an oil change but did not have the time. So I took it on over to the local Lube place and had them do the oil change with my oil and filter. Once I was done I went on my way. About a week or two later my wife noticed that there was oil in the garage and asked if I ever got the oil change done. When I went under the car to check the leak I noticed that the drain plug was gone along with the oil! I must have driven that car in heavy traffic without any oil and there was NO damage to the engine. Needless to say, I have been a believer ever since!
